Manufactured and sold by:

Kobold Messring GmbH
Nordring 22-24
D-65719 Hofheim
Tel.: +49(0)6192-2990
Fax: +49(0)6192-23398
E-Mail: info.de@kobold.com
Internet: www.kobold.com
2. Note

Please read these operating instructions before unpacking and putting the unit into operation. Follow the instructions precisely as described herein. The devices are only to be used, maintained and serviced by persons familiar with these operating instructions and in accordance with local regulations applying to Health & Safety and prevention of accidents.

When used in machines, the measuring unit should be used only when the machines fulfil the EWG-machine guidelines.

as per PED 97/23/EG
for FPS-11

In acc. with Article 3 Paragraph (3), "Sound Engineering Practice", of the PED 97/23/EC no CE mark.

3. Instrument Inspection

Instruments are inspected before shipping and sent out in perfect condition. Should damage to a device be visible, we recommend a thorough inspection of the delivery packaging. In case of damage, please inform your parcel service / forwarding agent immediately, since they are responsible for damages during transit.

Scope of delivery:
The standard delivery includes:
- Flow Monitor Model: FPS
- Operating Instructions
4. Regulation Use

The model FPS is installed for monitoring flow of liquid medias in pipes with diameter between 1/2” and 8”.
The instrument is provided with an adjustable limit switch. Only media may be monitored, which does not affect the materials used in the instrument. This device shall not be used in hazardous areas or for flammable liquids.

* For DN 25 a fitting is required in which the paddle can move freely. The values in brackets apply when using the supplied long paddle, which is shortened for service in NW 100 to NW 150 and which must be mounted together with the three short paddles.

5. Operating Principle

The KOBOLD flow monitor FPS operates according to the proven paddle bellows principle. The flowing medium acts on the paddle thus actuating a microswitch. Switching point can be freely adjusted and the device mated to different nominal pipe sizes by means of the replaceable paddle in conjunction with the additional adjustment features. The electrical device section is separated hermetically from the process fluid by means of a bellows. The special version of the flow monitor has been specially designed for minimum switching values. See table for switching values. The devices can be installed in any position.

6. Mechanical Connection

Before installation

- Please ensure whether the actual flow matches the switching range of the instrument
- Please ensure whether the allowable maximum operating pressure and operating temperature of the instruments will not be exceeded.
- Please ensure whether a straight run of 5 x pipe diameters at inlet and outlet is being observed.

Installation

- Select the paddle to suit the pipe internal diameter. To ensure stability the shorter paddle should always be left on. Make sure that the paddle can move freely in the pipeline and that it does not stick to the pipe wall.

- Using sealing tape screw the flow monitor into a T piece according to DIN 2950 with 1" outlet. The arrow on the housing must point in the direction of flow.
- The unit can be fitted in any position. If the unit is installed in a vertical pipe the weight of the paddle and the lever must be compensated with the range screw. This leads to changes in switching values (see Sec. Setting The Limit Contact).
- A suitable filter must be connected upstream for soiled media. This applies especially to fibrous soiling.
7. Electrical Connection

- Make sure that the voltage and current values in your plant do not exceed the respective voltage and current values specified for the flow monitor.
- Make sure that the electrical supply lines are de-energized.
- Remove the flow monitor housing by undoing the four screws.
- Connect the flow monitor as shown in the wiring diagram.
- Red-white opens if the flow rate drops to the set value. Red-blue close simultaneously and can be used as a signal contact.

The unit is ready for operation when you have connected your external devices to the limit contact.

8. Setting the Limit Contact

The units are delivered with an adjustable microswitch. The contact is a changeover contact that can be wired for use as a N/O or N/C contact. The units are set to the minimum switch-off value at the factory. The switch-off value can be set to a higher value by rotating the range screw clockwise.

9. Maintenance

In cases where the flow medium is uncontaminated, the FPS will remain maintenance-free. Large dirt particles can block the beam. Depending on the amount of dirt present in the medium, we recommend that the instrument is checked at regular intervals.
10. Technical Information

Brass design: MS 58, bellows of bronze, paddle of st. steel 1.4401
T piece: steel zinc-plated
Stainless steel design: stainless steel 1.4541, paddle of st. steel 1.4401
Max. medium temperature: -40 to +120 °C
Max. ambient temperature: -35 to +65 °C
Max. allowed pressure: brass 11 bar, stainless steel 30 bar
Max. pressure loss: approximately 0.01-0.03 bar
Inlet and outlet pipe section: min. 5 times nominal pipe size

Electrical details
Dust-proof microswitch as single-pole changeover contact
Switching voltage: max. 24-250 V_{AC}
Switching current: max. 8 A (inductive load)
max. 15 A (resistive load)
Case: ABS
Protection type: IP 65

13. Declaration of Conformance

We, KOBOLD-Messring GmbH, Hofheim-Ts, Germany, declare under our sole responsibility that the product:

Paddle Bellows Flow Monitor    Model: FPS-...

...to which this declaration relates is in conformity with the standards noted below:

EN 55014
Suppression of radio disturbances caused by electrical appliances and systems.

EN 61000-4-2 (IEC 1000-4-2)
Electrostatic discharge immunity test (ESD)

EN 61000-4-4 (IEC 1000-4-4)
Electrical fast transient/burst immunity test (BURST)

EN 61000-4-5 (IEC 801-4)
Surge immunity test

EN 60355-1
Safety requirements for electr. equipment for measurement, control and laboratory use.

following the provision of European Directives:

2004/108/EC
2006/95/EC
97/23/EG       PED
